(57) Abstract :

ABSTRACT Disclosed herein is a system (100) for a multimodal emotion-aware healthcare conversational framework comprising a user interface (102) integrating on a user device (104), a communication network (106), and a processing unit (108) comprising an input module (110) receiving facial, vocal, and textual data, a preprocessing module (112) normalizing and recalibrating data, a consent and privacy management module (114) setting data-access thresholds, a data flow module (116) determining secure local or server exchange channels, an emotion classification module (118) computing a fused emotion category, a discordance monitoring module (120) asserting escalation alerts, a response modulation module (122) classifying delivery pacing, an event logging module (124), an output module (126), and a database (128).
